- Multiple touch points
- No calibration required

Capacitive touch screens

The standard capacitive touch screens of PresTop are available in size 17", 19" and 21,6". The screen has a full optical glass plate to the edge. The back is nicely finished and a big advantage is that the front of the screen can be adapted with your own logo.

Compatible with Omnitapps Multi Touch Applications

Omnitapps

Multi Touch Applications

Touchscreens in every shape and size

As manufacturer of the Philips large touch-screens, touch tables and totems PresTop introduces the first Egg shaped touch screen. This touchscreen has the same touch technique as used in the Apple Ipad and is one the many possible shapes PresTop can make.

Another example is a touch screen integrated in a round bar table and a 17" touch screen made for Bandridge. Screens from 12" to 22" are integrated in tempered glass. In this 4-6 mm thick tempered glass projected capacitive touch is integrated.
